

Convert gene sequence into x- and y- coordinates

Source code: CGR_v2.cpp

Example input file: A_55_P2423586_Eya1_1.txt

Example output file: CGR_coord.txt

Instructions:

1) Compile source code to app called CGR using the line command:

```
g++ CGR_v2.cpp -o CGR
```

2) Run the program by invoking the following line command:

```
./CGR A_55_P2423586_Eya1_1.fna CGR_coord.txt
```
